

Content Analysis of Mizo Newspaper With Special Reference to Vanglaini

A Dissertation submitted in partial fulfillment of the requirement for the
Degree of Master of Philosophy in Library and Information Science

Submitted by

LALDAMPUII

MZU Registration No. 776 of 2005-06

M.Phil. Registration No. MZU/Mphil/ 88 of 15.05.2012

Dr. R N Mishra

Associate Professor

CERTIFICATE

This is to certify that the dissertation entitled “**CONTENT ANALYSIS OF MIZO NEWSPAPER WITH SPECIAL REFERENCE TO VANGLAINI**” submitted by Ms.Laldampuii for the award of the degree of Master of Philosophy in Library and Information Science is carried out under my guidance and incorporates the student bonafide research. This is the candidate original work and is worthy of examination.

Aizawl, Mizoram

(Dr. R.N. Mishra)

Supervisor

Acknowledgement

First of all, I would like to express my sincere thanks to our Almighty God for giving me an opportunity and strength to complete my dissertation work.

Sincere thanks also goes to my supervisor Dr. R.N. MISHRA, Associate Professor, Department of Library and Information Science, Mizoram University for his intellectual, understanding, untiring help and invaluable qualitative suggestions enable me to successful completion of this dissertation work.

I would also give thanks to Prof. Pravakar Rath, Head of Department, Department of Library and Information Science, Mizoram University, for his valuable guidance and continuous encouragement for helping in the completion of this dissertation work.

I want to thank faculty members, staff and students in the Department of Library and Information Science, without whom I never would have finished this dissertation. Thanks to my previous supervisor Dr. S. Ravi Kumar, Assistant Professor, Department of Library and Information Science, North Eastern Hill University (NEHU) for selecting an interesting topic for me.

It has been a tremendous and very difficult to get requisites information for various sources. Lastly, but not the least, I would also thanks to my family who could not get much of my attention and always encouraged me with their moral support while I am working with this work. God bless them all.

Aizawl

CHAPTER- 1

INTRODUCTION

1. INTRODUCTION

Communication is an essential component, in that newspaper plays a vital role in disseminating information. The newspaper has become the main source of information about local, national and foreign affairs. Though radio and television convey important news and messages quicker than the newspaper, they seldom give the details of an incident. The newspapers, on the other hand, have a special role in disseminating information or news to the citizen since newspapers are read by the general public. It gives not only more detail about a particular incident but it is more descriptive. This is greatly important today when political changes occur with rapidity unknown before. Besides, the newspaper is easier to carry and it could be read at any time during the day. Further, the permanence of the printed word helps one to refresh ones, memory of certain facts and incidents reported in the past.

Newspaper is one of the most vital and effective mediums that cater through its wide coverage to the divergent interests of the society. It is considered as the mirror of the world. Local daily newspaper is one of the most important media for communication in Mizoram. Mizoram is a small state with a population of 10,901,014 is situated in the North Eastern region of India. A number of dailies have regularly been coming out to satisfy the information requirements of the people. The dailies are also preserved by some of the important libraries in the State for the current and future use of the researchers.

Like National or International newspapers, the functions of the regional dailies are:

- To convey government policies to the public
- Keep government informed policies and
- Keep government informed of public reactions to government policies and
- Keep the government and public informed of events taken place in and around.

Newspapers are classified through various columns like editorials, special articles, letters to editor, commercial news, advertisement, etc. so that one can have easy access to all aspects of current news. Newspaper is supposed to provide reliable news and give correct details about every new item with respect to five elements of who, what, when, where and how. It is readily available whenever one has leisure time. In fact, the newspaper published the news, which cannot come in television or radio. News in detail can be known only through the daily newspaper. The newspaper plays a very crucial role in all the development activities of a society. They provide information and knowledge not only on local happenings. Through the newspaper the general people have a better awareness of their needs and references and fuller information on the conditions and possibilities of their areas.

The importance of newspaper articles has been increased greatly by the spread of education. Education sharpens one's curiosity about events in distant lands and also makes one conscious of the necessity to maintain one's reading habits. In both respects the newspaper appeals most, especially if one finds little time to read books. In this knowledge society newspaper are moving on from traditional printed newspaper to online newspaper.

Newspapers are one form of media that present issues to the public and may help them, as well as reflect, community support for an issue. Monitoring of regional newspapers has been recommended because they are close to the local context of a community and can serve as a forum for public and community leaders. Prominence of articles concerns the placement and presentation of articles, which attract the reader's attention. Factors related to prominence include placement of the article in the main section of the newspaper, placement on the front page of a section, placement on the top of the page, headline font size, article length and presence of pictures or other visuals. Localization of stories in addition to providing information about, for, or by the community, may also enhance the relevance of the message. Framing of the issue and the type of article (news, feature, opinion, etc.) can influence how the issue is defined, the scope and depth of coverage, and calls to action.

Newspapers are the most useful sources of information on current affairs. The current study is to analyze the content covered by the Mizo daily Vanglaini because this kind of work has not been done in the past. Vanglaini is a regional newspaper, with wide readership across the state. Newspaper from the year 2009-2010 will be taken for this study, which comprises 245 articles.

Mass media strategies have been used in research to educate and advocate for opinion and behavioral changes at individual, social and community levels.

Content analysis of newspapers as part of an evaluation may be a valuable method to help assess community opinions, advocacy and change. Information gained through the content analysis may also inform and enhance ongoing media advocacy efforts.

A news article discusses current or recent news of either general interest (i.e. daily newspapers) or of a specific. A news article can include accounts of eye witnesses to the happening event. It can contain photographs, accounts, statistics, graphs, recollections, interviews, polls, debates on the topic, etc. Headlines can be used to focus the reader's attention on a particular (or main) part of the article. The writer can also give facts and detailed information following answers to general questions like who, what, when, where, why and how.

Articles are importance as they are very up-to-date. Newspapers are the most current, magazines are next and journals are slightly behind the other two, but still very current. In most cases, you know who the author is. In the case of newspapers and magazines, this is not always true, but if you use reputable newspapers and magazines, you can be fairly certain that the information is acceptable as an editor looks through every single article before it gets published in these sources. In newspapers articles it contains the name of the author, and often, the authors' qualifications are also listed. In the case of journal articles, there is always a list of references at the end of the article. The references tell not only where the author got his or her information, but they also verify the accuracy of the information in the article. So, basically, what like the Internet, daily newspaper articles are up-to-date, but unlike the Internet, newspaper articles are more trust-worthy and potentially more accurate than articles found on the Internet.

1.1 SIGNIFICANCE AND SCOPE OF THE STUDY

Newspaper is an important medium of communication especially in Mizoram because it is geographical isolated from the mainland. As National paper cannot reach Mizoram on the same day, and the regional dailies play a crucial role to disseminate information. Total 88 dailies newspapers are published in Mizoram primarily in two languages such as, (i) Mizo and (ii) English. Vanglaini comes under the purview of Mizo newspaper and the same has been selected because of its wide coverage than the others newspapers. Further, it covers all areas of Mizoram and also highlights the important news on Regional and National importance. The newspaper was initiated from Aizawl, the capital of Mizoram since 1978 and as such has the existence in Mizoram for last 35 years. This has been recognized as an important daily in entire North-East, India due to its trustworthy news. This is also widely circulated newspaper in Mizoram than other daily in Mizoram. Due to its coverage, contents, clarity, Vanglaini newspaper has been taken under the purview of study. Significance of the study lies with the fact that, Vanglaini happens to be a recognized newspaper both at Government level including private level for its presentation style, coverage, illustrations, statistics, impartial view including clarity of information. The significance of the study is to explore the unexplored Mizo daily which is first of its kind. A large number of newspapers published regularly with a vast amount of information are considerably used by the people from all walks of life for their current awareness purpose but, they are not aware of the contents of the articles even if those are being published in the local language.

The scope of the study is limited to the centre page articles published by eminent authors regularly for information and betterment of the society. It is also limited to the articles published on 2009 and 2010 i.e., 2 (Two) years. However, the editorial portions of the centre page article have been excluded from the purview of the study for clarity and transparency. Further, the study also excludes other newspaper published from the soil of Mizoram. Mention may be made that, the study was undertaken on the centre page articles which are published on Monday only. Further, the study is focused on analyzing the centre page articles as discussed and around three articles are published in the center page on a regular basis thus, coming to 245 articles which have been published during 2009 and 2010. The content of newspaper articles have been analysed on the basic of its coverage, currency of news, type of approach (analytical, descriptive, informative, critical) etc.

1.2 REVIEW OF LITERATURE

Literature review is one of the important components of the research which reveals the converge area including the gap. A body of text in the literature aims to review the critical point of current knowledge and or methodological approaches on a particular topic. Literature reviews are secondary sources, and as such, do not report any new or original experimental work. The scholar explored a good quantum of literature both traditional including books, journals, bulletins etc. including electronic books, journals etc. pertaining the field of the study. A selected list of literature has been chosen by the scholar for review which has been enlisted below. The literatures have been arranged according to descending sequence relevant to the study.

- Berelson, Bernard. (1952). *Content analysis in communication research*. Free Press. 220

Berelson views it content analysis as “a research technique for the objective, systematic and quantitative description of the manifest content of communication”. The review covers primarily the 1935-1950 periods, listing 17 types of application of content analysis with abstracts of representative studies in each type and explanatory comment on them. In addition to quantitative studies, the author considers qualitative types and gives examples of them, and devotes additional chapters to the units and the categories of content analysis. A chapter on technical problems-sampling, reliability, presentation and modes of inference-concludes the text. 350-item bibliography.

- Mitchell, Robert Edward (1967). ‘The use of content analysis for explanatory studies’. *Public Opinion quarterly*. 31(2); 230-241.

The focus of this paper is on possible ways of using content analysis of articles, newspapers, or other types of communication data for explanatory rather than merely descriptive purposes. Frequent comparisons are made with analyses of public opinion survey data to illustrate possibilities and methodological problems. This attention to higher-level uses of content analysis is timely and important because of recent linguistic and technological developments.

- Buchholz, Michael and Bynum, Jack E. (1982). 'Newspaper Presentation of America's Aged: A Content Analysis of Image and Role'. *The Gerontologist*, 22(1); 83-88.

The authors shows the content analysis of 1703 stories from the New York Times and the Daily Oklahaman (Oklahoma City) indicates that the elderly are not presented as negatively and passively as some media critics say, but that neither newspaper covers the aging story in a meaningful way. The data, selected randomly from 1970 and 1978, were tested by X² and one way analysis of variance.

- Jarvelin, Kalervo and Vakkari, Pertti. (1990). "Content analysis of research articles in Library an Information science". *Library and Information Science Research*. 12; 395-421

The authors Jarvelin and Vakkari reported content analysis of the research of library and information science (LIS) from 1965 to 1985. The aim is to find out how international research in LIS is distributed over topics, and what approaches and methods have been used to investigate these topics. The study samples consist of 142,359 and 449 full length research articles published in 1965,1975 and 1985, respectively, in core LIS journals. The proportion of library and information service activities and information storage and retrieval among the topics of the research articles was each 25% to 30% through the years. There was very little research on methodology (1%-8%), information seeking (6%-8%)and scientific communication (5%-7%). The proportion of empirical research strategies was high (49%-56%) with survey method (20%-23%) as the single most important method. A conceptual research strategy (mainly verbal argumentation) was employed in 23%-29% of the articles and system analysis, description and design in 10%-15%. The most remarkable changes from 1965 to 1985 are the loss of interest in methodology and in the analysis of LIS and the change of interest in information storage and retrieval from classification and indexing (from 22%to 6%)to retrieval (from 4%to 13%). Cross tabulations of article topics with research strategies and approaches are presented.

- Downe, Barbara. (1992). 'Content analysis: Method, applications, and issues'. *Health Care for Women International*. 13(3); 313-321.

Downe shows the content analysis research methodology is detailed, its procedures are described, some examples of its application are provided and the controversial issues surrounding its use are discussed. Because of its focus on human communication, content analysis offers practical applicability, promise, and relevance for research involving the practice and education of nurses and other helping professionals.

- Roffe, Daniel., Aust, Charles F. and Lacy, Stephen R. (1993). The effectiveness of random, consecutive day and constructed week sampling in newspaper content analysis. *Journalism & Mass Communication Quarterly*. 70 (1); 133-139.

The authors in the study have compared 20 sets each of samples of four different sizes using simple random, constructed week and consecutive day samples of newspaper content. Comparisons of sample efficiency, based on the percentage of sample means in each set of 20 falling within one or two standard error of the population mean show the superiority of constructed week sampling.

- Riffe, Daniel and Freitaq (1997). A content analysis of content analyses: Twenty – Five years of Journalism quarterly. *Journalism & Mass Communication Quarterly*. 74(3); 515-524.

Examination of the increasing number of articles employing quantitative content analysis in 1971-95 Journalism & Mass Communication Quarterly showed primary focus on news/editorial content in US media. Nearly half examined newspapers, and half were coauthored. Most used convenience or purposive samples. Few involved a second research method or extra-media data, explicit theoretical grounding, or research questions or hypotheses. Half reported intercoder reliability, and two-fifths used only descriptive statistics. Analysis of trends shows growth in coauthorship and reporting of reliability, and increasing emphasis on more sophisticated statistical analysis. No parallel trend exists, however, in use of explicit hypotheses/research questions or theoretical grounding.

- Welch, Michael. Fenwick, Melissa. And Robert, Meridith. (1997). "Primary Definitions of Crime and Moral Panic: A Content Analysis of Experts' Quotes in Feature Newspaper Articles on Crime" *Journal of Research in Crime and Delinquency*. 34(4); 474-494.

In this study, the authors contributed to the area of inquiry by administering a content analysis of 105 feature articles on crime published in four national newspapers between 1992

and 1995. In addition to exploring the topics of crime, they systematically examined the nature of quotes offered by two groups of experts, namely, state managers and intellectuals. Their findings support previous research demonstrating the Medias heavy reliance on law enforcement officials in formulating primary definitions of crime. The significance of primary definitions of crime within the context of the dominant ideology and moral panic is discussed at length.

- Hardmeier, Sibylle (1999). 'Political poll reporting in Swiss print media: Analysis and suggestions for quality improvement'. *Int. Journal of Public Opinion Research*. 11(3); 257-274.

This article deals with the quality of political poll reports in the Swiss print media. A content analysis of 31 different papers reveals that the methodological information given in newspaper articles is more elaborate when papers use various devices such as information boxes. When polls are reported that other papers or organizations financed, methodological information is scarce. Beyond such formal criteria, a case study shows that aspects of measurement and specification errors must also be taken into account, which is highly relevant in the conceptualization of polls and within the press-polling connection.

- Lacy, Stephen, et. Al. (2001). Sample Size for Newspaper Content Analysis in Multi-Year Studies. *Journalism & Mass Communication Quarterly*. 78(4); 836-845.

Lacy has examines the most efficient method of sampling content from five years of daily newspaper editions. Selecting nine constructed weeks (nine issues from a Monday, nine from a Tuesday, etc.) from five years is more efficient than the ten constructed weeks-two from each year-suggested by previous research on population of a year's newspaper content. This rule holds provided the variables being measured do not have large variances.

- McKechnie, Lynne E. F and Pettigrew, Karen E. (2002). Surveying the use of theory in library and information science research: a disciplinary perspective. *Library Trends*. 50(3); 406-17

In this study, content analysis of 1,160 library and information science (LIS) articles published in six LIS journals between 1993 and 1998 was conducted to examine the use of theory in LIS research. The findings imply that differences exist in the use of theory in LIS that are associated with the broad disciplinary content of the research. These differences may arise from variant conceptions of and approaches to the use of theory in the research traditions of the humanities, social sciences, and sciences. It is suggested that the

multidisciplinary background of LIS researchers provides a rich but still underutilized opportunity for the use and development of theory within LIS.

- Granner, Michelle, L, Sharpe, Patricia A, Burroughs, Ericka L, Fields, Regina and Hallenbeck, Joyce (2010). Newspaper content analysis in evaluation of a community-based participatory project to increase physical activity'. *Health Education Research*, 25(4); 656-667.

Newspaper content analysis in evaluation of a community based participatory research project focused on increasing physical activity through policy and environmental changes, which included activities related to media advocacy and media-based community education. A total of 2681 articles from 1764 newspapers were analyzed. The study demonstrates that media content analysis can be a valuable component in evaluating community based interventions.

- Maity, Goutam (2010). "Census of Communication flow of newspaper information in India and its implications for newspaper information retrieval". *IASLIC Bulletin*. 55(3); 143-157.

Maity tried to measure the quantity of both newspaper information generation and consumption. This article thus infers that the communication flow of newspaper information indicates a state of information explosion/overload. Conclusion are drawn that newspaper information explosion forms/justifies the basis towards designing an effective newspaper and or a newspaper information retrieval system.

- Paisley, Suzy (2010). Classification of evidence in decision-analytic models of cost-effectiveness: A content analysis of published reports. *International Journal of Technology Assessment in Health Care* . 26.(04); 458-462

Paisley undertaken a content analysis of published reports of models. Details of cited sources were extracted and categorized according to three dimensions; type of information provided by the evidence, type of source from which the evidence was drawn and type of modeling activity supported by the evidence.

- Glaser, Hollis F. (2011). 'Content Analysis of Students'. Favorite Magazines: Class Exercise'. 25(4); 189-191

The author conducted on content analysis of students favorite magazines from this the students will be able to distinguish between advertising the editorial content; compare the economic differences among magazines; analyze the relationships among articles, advertising, and audience and practice content analysis.

- Yunya, Song and Tsan-Kuo, chang (2012). Selecting daily newspaper for content analysis in China. *Journalism Studies*. 13 (3); 356-369.

The author compared different sampling methods and sample sizes in the selection of daily newspapers in China for content analysis of the news. Results show that the method of constructed week sampling is more efficient than simple random sampling or consecutive day sampling, and a single constructed week allows reliable estimates of news content in a population of six months of newspaper editions even for highly volatile variables.

1.3 RESEARCH DESIGN

1.3.1. STATEMENT OF THE PROBLEM

As knowledge advances, more people become involved in research and in turn the nation becomes more prosperous. The present topic is an analytical study of Vanglaini, one of the leading Mizo newspapers in Mizoram. The study is undertaken on the centre page that is the editorial page. The centre page contains editorial and three other articles. The study is undertaken on these three articles those are published on one day of the week i.e., Monday as already mentioned. The study is carried out because of its importance as the intellectuals, writers, authors contribute their knowledge primarily to build and betterment of the society which, however do not restrict to any specific area. Such an analytical study is first of its kind and no one has taken seriously to view the same in past. The problem lays with the fact that, in spite of a good coverage in its contents, the people are neither aware nor conscious to implement the same or used to the words. The scholar has taken sporadic attempt to highlight the importance of such article through analysis which will give much impact on the society.

1.3.2. OBJECTIVES OF THE STUDY

The objectives of the present study are to:

- Study the subject of the article, type of coverage and identify the use of weak, strong, positive and negative words in various news items.
- Ascertain the frequency of occurrence of words in the subject published in the newspaper.
- Identify the usage of non Mizo term and use of unique Mizo terms, cluster of terms or concepts used in the newspaper and
- To determine the biasness, if any while publication of regional, national or international news by the editorial team during the coverage of the study.

1.3.3 RESEARCH METHODOLOGY

Methodology adopted for the study is based on the data available in the newspaper on 2009 and 2010. Therefore, the scholar adopted a library method to obtain the data published during the period of study. The scholar collected the published articles during the years 2009-2010. Purposive sampling method has been followed and the articles published on every Monday in the year 2009 and 2010 in Vanglaini newspaper. A total number of 245 news items have been taken for the study. The copy of the news articles were collected from Vanglaini library and following methods were applied to count and analyze the content of the vernacular daily. The methodology for word counting is as follows.

The scholar selected the key words from different texts. All the Mizo words and Non-Mizo words i.e., the English words were selected and grouped according to their subject. Counting was done according to the degree of utilization of non Mizo term in the vernacular daily. The scholar made the study of a relationship of the frequency of occurrence of words in a text and their ranking in a descending order for analysis.

1.4. CHAPTERIZATION

The study is divided into five chapters. Chapter 1 of the study projected the importance of newspapers especially newspaper articles, Significance and Scope of the Study, Review of Literature, Research Design comprising Statement of the Problem, Objectives of the Study, and Research Methodology. Chapter 2 discusses the growth of newspaper in both National and Mizoram and also highlighted about the development of newspaper in Mizoram. Chapter 3 discusses details of Vanglaini Newspapers. Chapter 4 reflects the study focuses on Content Analysis, Bibliometrics (different Laws of Bibliometrics such as Zipfs law, Lotka's Law, and Bradfords Law), Scientometrics, etc. Chapter 5 of the study presents a details account of Data Analysis and Findings. Suggestions and Conclusion are placed in Chapter-6 of the study including a comprehensive bibliography at the end.

CHAPTER- 2

GROWTH AND DEVELOPMENT OF NEWSPAPER

2. INTRODUCTION

A newspaper is a scheduled publication containing news of current events, informative articles, diverse features and advertising. It usually is printed on relatively inexpensive, low-grade paper such as newsprint.

The shorter Oxford English Dictionary identifies Newspapers by its appearance and format defining it as: A printed publication, now usually daily or weekly, consisting of folded unstapled sheets and containing news.

General interest newspapers typically publish stories on local and national political events and personalities, crime, business, entertainment, society and sports. Most traditional papers also feature an editorial written by an editor column that expresses the personal opinions of writers. The newspapers is typically funded by paid subscriptions and advertising.

A wide variety of material has been published in newspapers, including editorial opinions, criticism, persuasion and op-eds; obituaries, entertainment, reviews of radio, movies, television, plays and restaurants; classified ads; display ads, radio and television listings, etc.

Newspapers typically meet four criteria:

- **Publicity:** Its contents are reasonably accessible to the public
- **Periodicity:** It is published at regular intervals
- **Currency:** Its information is up to date
- **Universality:** It covers a range of topics

2.1 NEWSPAPER SCENARIO IN INDIA

Indian print media is at a massive business in the media world and its newspapers are said to offer majority of national and international news. The history of newspaper in India began in 1780, with the publication of the Bengal Gazette from Kolkata.

The advent of the first newspaper in India occurred in the capital city of West Bengal, Calcutta (now Kolkata). James Augustus Hickey is considered the "father of Indian press" as he started the first Indian newspaper from Kolkata, the 'Bengal Gazette' or 'Calcutta General Advertise' in January, 1780. This first printed newspaper was a weekly publication. In 1789, the first newspaper from Bombay (now Mumbai), the 'Bombay Herald' appeared, followed by the 'Bombay Courier' in the following year. Later, this newspaper merged with the Times of India in 1861. These newspapers carried news of the areas under the British rule. The first newspaper published in an Indian language was the Samachar Darpan in Bengali. The first issue of this daily was published from the Serampore Mission Press on May 23, 1818. Samachar Darpan, the first vernacular paper was started during the period of Lord Hastings.

In the same year, Ganga Kishore Bhattacharya started publishing another newspaper in Bengali, the 'Bengal Gazetti'. On July 1, 1822 the first Gujarati newspaper, the Bombay Samachar, was published from Bombay, which is still in existence. The first Hindi newspaper, the Samachar Sudha Varshan started its circulation in 1854. Since then, the prominent Indian languages in which newspapers had been published over the years are Hindi, Marathi, Tamil, Malayalam, Telugu, Urdu and Bengali languages. The Indian language newspapers eventually took over the English newspapers according to the NRS survey of newspapers. The main reason was the marketing strategy that was followed by the regional papers, commencing with Eenadu - a Telugu daily started by Ramoji Rao. The second reason was the growing literacy rate. Increase in the literacy rate had direct positive effect on the rise of circulation of the regional papers. The people were first educated in their mother tongue according to their state in which they live for and eventually, the first thing a literate person would try to do is read the vernacular papers and gain knowledge about his own locality. Moreover, localization of news has also contributed to the growth of regional newspapers in India. Indian regional papers have several editions for a particular state to offer a complete scenario of local news for the reader to connect with the paper. Malayala Manorama features about 10 editions in Kerala itself and six others outside Kerala. Thus regional papers in India aim at providing localized news for their readers.

Eventually, the advertisers also realized the huge potential of the regional paper market, partly due to their own research and more owing to the efforts of the regional papers to make the advertisers aware of the huge market. These advertisers paid revenues to the newspaper house and in return publicized their products throughout the locality. Thus, newspapers in India not only acted as news providers but also promoters of certain market products. Some of the prominent newspapers in India in the recent times are The Times of India, The Statesman, The Telegraph, The Economic Times, Indian Express and so on. The Economic Times is one of the India's leading business newspapers; carrying news about the Economy, Companies, Infrastructure, Trends in the Economy, Finance, Stocks, Forex and Commodities, news from around the world and from the world of politics besides editorial and various other features. The Malayala Manorama releases daily, weekly, monthly and annual publications from Kerala. Started in 1988 in Tamil and Telegu languages, it is now published in other regional languages like Hindi, Bengali, as well as in English. Among the various publications, the Malayala Manorama Daily has the largest circulation, selling about 11 lakhs 50 thousand copies daily. The Times of India was founded in 1838 as The Bombay Times and Journal of Commerce by Bennett, Coleman and Company, a colonial enterprise now

owned by an Indian conglomerate. The Times Group publishes The Economic Times (launched in 1961), Navbharat Times (Hindi language), and the Maharashtra Times (Marathi language).

The newspapers collected their news from the news agencies. India has four news agencies namely, the Press Trust of India (PTI), United News of India (UNI), Samachar Bharti and Hindustan Smachar. Newspapers and magazines in India are independent and usually privately owned. About 5,000 newspapers, 150 of them major publications, are published daily in nearly 100 languages. Over 40,000 periodicals are also published in India. The periodicals specialize in various subjects but the majority of them deal with subjects of general interest. During the 1950s, 214 daily newspapers were published in the country. Out of these, 44 were English language dailies while the rest were published in various regional languages. This number rose to 2,856 dailies in 1990 with 209 English dailies. The total number of newspapers published in the country reached 35,595 newspapers by 1993 (3,805 dailies). Newspaper sale in the country has increased by 11.22% in 2007. By 2007, 62 of the world's best selling newspaper dailies were published in countries like China, Japan, and India. India consumed 99 million newspaper copies as of 2007, making it the second largest market in the world for newspapers.

Newspapers in India have almost created a huge industry in the nation. It publishes the largest number of 'paid-for titles' in the world. In 1997, the total number of newspapers and periodicals published in India was around 41705, which include 4720 dailies and 14743 weeklies. However, in the last one decade the news media in India has changed rapidly. All the major news media outlets have an accompanying news website. A new class of newspapers in India is entirely internet based.

2.2 NEWSPAPER SCENARIO IN MIZORAM

The history of print media in Mizoram dates back to British colonial rule. The hand-written Mizo Chanchin Laisuih is the oldest known newspaper in the state. A four page issue, it was started in 1898 under the guidance of J. Shakespeare who also published another newspaper in November of 1902, call Mizo leh Vai Chanchin. The monthly newspaper was printed in Sylhet Dinna Nath Press, Tun hapta chanchinbu (1939), Nitin Chanchinbu (1939), Mizo chanchinbu (1946), Zoram thupuan (1947) followed in quick succession.

Two rival publication, namely, "Zoram Thupuan" and "Hmar Arsi" were in circulation in the early 1950 and played significant role during the post independent era in the erst while Mizo

Hills district of Assam. Hmar Arsi, established in 1948 was the independent mouth piece of the nascent political party in then Lushai Hills –the Mizo Union, established in 1946.

In 1955 Mizo Arsi newspaper was published under the union organ. The first printed newspaper was a weekly publication using cyclostyle. 1968 saw the birth of the “Tawrhbawm’-a Mizo daily followed by the ‘Mizo Aw’ in 1972 (Mizo) and the pioneer English daily, ‘Aizawl Times’ was published. The Aizawl Times saw the day light just one week ahead of the “Highlander”. Both the Aizawl Times and the Highlander then were printed in Aizawl.

Events that had taken place in 1972 were fast and momentous. Mizoram become a UT; the erstwhile, Mizo District was dissolved and the name Mizoram was adopted to replace the Mizo Hills for good.

In 1960 a war arose in Mizoram with this all newspaper were stop. And in 1970 when the war was subside Mizoram was announced as Union Territory, all the newspaper was produced again with another new six newspaper namely Harhna, 1974 Chhawrpial, Hunthar, Remna Palai, Romei and Highlander came into existence. Highlander newspaper was the first English newspaper in Mizoram. All this newspapers are printed using cyclostyle, sometimes it was published daily and sometimes weekly.

When in the 1980 Mizoram was with peace and development take place, especially in disseminating news to the people. Daily newspaper and magazine came regularly such as Remna Eng, Zoram Tlangau, Youth Herald, Senhri, Hriatna and Vanglaini.

When in the year 2000 newspaper publishing firms started experiencing progress and development as the era of IT revolution set in. The traditional system of operating treadle machines was replaced by the installation of offset printing machines. The aged old practice of the composition of types manually was a thing of the past by the turn of the new millennium.

Mizoram which is among the most peaceful states in india, has 89 dailies publications for a population of 10, 91,014. The capital city, Aizawl, alone has 31 newspapers, 11 from the district capital of Lunglei; 4 from Hnahthial; 7 from Mamit; 6 from Champhai; 6 from Kolasib; 9 from Serchhip; 5 from Lawngtlai; 8 from Saiha; and 2 from Tuipang.

Mizoram has 89 dailies, 12 magazines, and 13 electronic media. Of the 89 dailies publication only two are in English and 87 in Mizo language. The state has 102 accredited journalists. Special magazines in sports, fashion, education and business have been popular among the reading public. With the exception of one or two newspapers and local news letter’s dailies are not published on Sunday in Mizoram.

Aizawl with 31 publications and lunglei with 11 are the major publishing's centres, however the area of distribution has extended to remote rural areas.

National newspapers do not have a recognizable presence in Mizoram, one reason being the remote location of the state. Only the telegraph has its branch office in Mizoram. Hence, the local dailies play a major role in the live of Mizos.

Every district in Mizoram has its own newspapers. As the terrain is hilly, it is not possible to send the newspapers out of the district.

Although the Mizo dailies are normally not more than eight pages, they are quite comprehensive. The number of pages has remained small owing to lack of investigative journalism and feature writing. However, some progress can be expected in these areas as competition among the various newspapers is set to intensify.

The following are the list of daily newspapers in Mizoram with the name of the editor

AIZAWL		
Sl. No.	Name of Editor	Name of Newspaper
1	Lalchhuana, Robert	Romei
2	Zirliana, D. R.	Mizo Aw
3	Pachua, Lalbiakthanga	Zoram Tlangau
4	Sapdanga, K.	Vanglaini
5	Vulluaia, C.	Harhna
6	Lalzamlova, C.	Chhawrpial
7	Lalthanzama	Sakeibaknei
8	Lalmachhuana, T.	Dingdi
9	Khiangte, Zonunsanga	Lenlaini
10	Rodingliana, A.	Thuthar
11	Renthlei, H. D.	Mizo Express
12	Sailo, Lalsangluaii	Tawrhawm
13	Lalthanzaui	Entlang
14	Lalhleia, E.	Aizawl Observer
15	Zabiaka, K.	New Link
16	Sangsuakthanga	National Observer
17	Sailo, Lalrinmawia	Thlirtu
18	Lalrambuatsaiha, C.	Aizawl Post

19	Zosangliana, H.	Evening Post
20	Lalkhawliana	Highlander
21	L. T. Sanga	Morning Post
22	Chhuanvawra, C.	Mizo Arsi
23	Tlau, Zohmingthanga	Zoram Politik
24	Lalmachhuana, C.	Youth Heralds
25	Lalhruaitluanga, K.	Khawpui Aw
26	Lalngaihawma, H.	Hnehtu
27	Laldinmawia, H.	Zozam times
28	Zotinkhuma, A.	Zoram Voice
29	Zothankhuma, K.	Virthli
30	Vantawl, Vanlalrema	Zalen
31	Lalbiakdika, T.	Zawlbuk
LUNGLEI		
1	Lalthansanga, H.	Lunglei Times
2	Chawngchhuma, C.S.	Hnamdamna
3	Chhangte ,Lianchama	Zo-Chhiar
4	Lalmuankima, K.	Ralvengtu
5	Lalrinpuia, K.	Vulmawi
6	Lalmuanzuala	Lunglei Tribune
7	Zadeng ,Lalremruata	Zo-En
8	Thanghmingliana Renthlei	Zun-Zam
9	Lalrintluanga, K.	Daifim
10	Chhuanvawra	Daily Post
11	Laldinpuia , C.	Zoram Herald
HNAHTHIAL		
1	Zosangliana, F	Calathea
2	Lalbuatsaiha, C	Hnahthial Today
3	Vanlalthara	Hnahthial Times
4	Laldingliana	Huichhuk
MAMIT		
1	Lahlpuia	Zolamtluang

2	Lalthanzuala, P.C.	Lentupui
3	Lalchhuanawma, H.	Mamit Times
4	Lalnunmawia	Mamit Post
5	Sailo ,Lalrindika	Mamit Express
6	Rokhuma, PC.	Phaileng Times
7	Khiangte ,Lalremruata	Kawrthah Post
CHAMPHAI		
1	Pachauu ,Lalhmingmawia	Pasaltha
2	Lalbiakmawia, F.	Dumde
3	Lalhruaitluanga, D. K.	Rihlipui
4	Lahlupuia	Lenrual
5	Ralte ,Vanlalzawna	Si-Ar
6	Ralte ,Lalrotluanga	Khawzawl Times
KOLASIB		
1	Lalmachhuana, S.	Turnipui
2	Lalthlamuana, K.	Ramnuam
3	Tlanmawia, C.	Duhlai
4	V. L. Auva, Andrew	Kolasib Today
5	Lawmzuala	Vairengte Aw
6	Lalmuanpuia	Chhuahtlang (Kawnpui)
SERCHHIP		
1	Pachauu ,Kapliana	Serchhip Times
2	Kawlnei ,Zonunsanga	Lenkawl
3	Ramengmawia, C.	Lamkal
4	Lawmkima, P.C.	Laisuih
5	Ralte ,Lalremruata	Ramlai Arsi
6	Lalbiakzau, H.	Serkhawpui
7	Lalrochhunga	Zothlifim
8	Renthlei ,Liantluanga	Vantawng
9	Zonunsanga, P. C.	Thenzawl Today
LAWNGTLAI		
1	Lallianzuala, V.	Lairam

2	Dengngura, Z. D.	Phawngpui Express
3	Ralte ,Lalngeta	Lawngtlai Post
4	Lalrinmawia, H.	Rameng
5	Lalthangzuala, Elvis	Rauthla
SAIHA		
1	Khara, Jeffrey	Moonlight
2	Dawpho, B.	Saiha Post
3	Hluna, C. Z.	Buannel
4	Hlychho ,Hmaoko	Maraland
5	Lalliana, H.	Saiha Times
6	Baithai, M.	Chhim Aw
7	Zama, C. L.	Saihawpui
8	Lalramnghaka	Kawleng
TUIPANG		
1	Lalrosiama, T.	Tipa Express
2	Thangvela, K.	Vohbik

CHAPTER- 3

VANGLAINI NEWSPAPER: AN OVERVIEW

3. INTRODUCTION

Vanglaini, the leading newspaper in Mizoram, started as a Mizo weekly in 1978, became a daily in 1986. Since then it has been continuously growing in circulation, readership and quality covering the entire state of Mizoram. It literally means ‘zenith of time or heyday’.

Vanglaini was found with a belief to provide reliable and creative media product and services. Over the years our independent editorial and impartial news reporting style won serious attention and confidence of the people.

Being in a fast changing business, it strives to anticipate customer’s preference through consistent quality and creative ideas. It tends to reinvent the quality and ideas everyday to meet reader’s expectation, and providing the best solution to the advertisers.

Vanglaini Newspaper is a Mizo daily newspaper. According to Public Information Bureau it has the largest circulation among all newspapers in Mizoram till today, the newspaper reported that in the city area that is Aizawl a total of 22700 newspapers are circulated, and outside the city area a total of 12000, a total number of 35700 is circulated over Mizoram. Vanglaini is the most widely read newspaper in Mizoram. A total number of around 30 staff is working in order to produce news to the people. This ranks Vanglaini as the top daily in Mizoram. It is owned and published by K. Sapdanga. The office is located at Zarkawt, Aizawl, Mizoram.

In the beginning it was first published around a group of friends and was later under taken by K. Sapdanga and was the first morning newspaper that came into existence in Mizoram.

Vanglaini newspaper is the first one to use broadsheet paper and first one to print in a web.

Vision: To provide reliable and creative media product and services.

Mission: To inform, educate and entertain through independent, impartial and creative journalism.

Values:

- Reliability is the foundation of Vanglaini: We are independent and impartial.
- Our customers are the heart of everything we do.
- We strive for consistent quality and service to give best value for money
- We respect each other and encourage diversified ideas so that everyone can give their creative best.
- Reinventing ourself: We strive to reinvent ourself everyday to improve our quality and service.

3.1 DIFFERENT PARTS OF VANGLAINI NEWSPAPER.

Vanglaini Newspaper contains 8 page and the different parts in Vanglaini Newspaper are as follows:

- **Headline, society page-** This section contains news about important or well known people who are celebrating special occasions or performing at a particular place. It also contains the most important local news. It is usually found on the front page of the newspaper. The title of the most important news is printed in big bold letters. It is called headline
- **Local and North East News section-** Part of this section contains news from the local and North East of the Nation. Another part contains leisure i.e. crossword, animation.
- **Classified Ads. Section-** This section contains advertisements which fall under headings like wanted, for lease or sale, etc
- **Centre Page-** Printed in this section is articles called editorials. An editorial gives views or opinions of the editor or publisher on certain issues or events. It also contains articles from different authors.
- **Announcements and obituary page-** This section are mostly personal and legal notices. In an obituary, you can find out about people who passed on, and people think their death should be mentioned to the community. When you would go to this section in a newspaper, you can most likely find a picture about someone and a short biography.
- **Entertainment, National/ International news section-** The National/ International section of a newspaper tells us about news in different states within the country and news in different continents. It also contains information about movies and other activities for entertainment business.
- **Sports and Advertisement-**In a sport section, we find out about different news about a basketball, soccer, tennis, etc.

CHAPTER- 4

CONTENT ANALYSIS: BASIC ISSUES

4. INTRODUCTION

Content Analysis is “A Procedure designed to facilitate the objective analysis of the appearance of words, phrases, concepts, theme, characters, or even sentences and paragraphs contained in printed or audio visual materials”.

Bernard Berelson defined Content Analysis as "a research technique for the objective, systematic, and quantitative description of manifest content of communications" (Berelson, 74). Content analysis is a research tool focused on the actual content and internal features of media. It is used to determine the presence of certain words, concepts, themes, phrases, characters, or sentences within texts or sets of texts and to quantify this presence in an objective manner. Texts can be defined broadly as books, book chapters, essays, interviews, discussions, newspaper headlines and articles, historical documents, speeches, conversations, advertising, theater, informal conversation, or really any occurrence of communicative language. To conduct a content analysis on a text, the text is coded or broken down, into manageable categories on a variety of levels--word, word sense, phrase, sentence, or theme--and then examined using one of content analysis' basic methods: conceptual analysis or relational analysis. The results are then used to make inferences about the messages within the text(s), the writer(s), the audience, and even the culture and time of which these are a part. For example, Content Analysis can indicate pertinent features such as comprehensiveness of coverage or the intentions, biases, prejudices, and oversights of authors, publishers, as well as all other persons responsible for the content of materials.

Content analysis is a product of the electronic age. Though content analysis was regularly performed in the 1940s, it became a more credible and frequently used research method since the mid-1950's, as researchers started to focus on concepts rather than simply words, and on semantic relationships rather than just presence (de Sola Pool, 1959).

4.1 USES OF CONTENT ANALYSIS

Due to the fact that it can be applied to examine any piece of writing or occurrence of recorded communication, content analysis is used in large number of fields, ranging from marketing and media studies, to literature and rhetoric, ethnography and cultural studies, gender and age issues, sociology and political science, psychology and cognitive science, as well as other fields of inquiry. Additionally, content analysis reflects a close relationship with socio- and psycholinguistics, and is playing an integral role in the development of artificial intelligence. The following list (adapted from Berelson, 1952) offers more possibilities for the uses of content analysis:

- Reveal international differences in communication content
- Detect the existence of propaganda
- Identify the intentions, focus or communication trends of an individual, group or institution
- Describe attitudinal and behavioral responses to communications
- Determine psychological or emotional state of persons or groups

4.2 TYPES OF CONTENT ANALYSIS

There are two general categories of content analysis: conceptual analysis and relational analysis. Conceptual analysis can be thought of as establishing the existence and frequency of concepts in a text. Relational analysis builds on conceptual analysis by examining the relationships among concepts in a text.

4.2.1 CONCEPTUAL ANALYSIS

Traditionally, content analysis has most often been thought of in terms of conceptual analysis. In conceptual analysis, a concept is chosen for examination and the number of its occurrences within the text recorded. Because terms may be implicit as well as explicit, it is important to clearly define implicit terms before the beginning of the counting process. To limit the subjectivity in the definitions of concepts, specialized dictionaries are used.

As with most other research methods, conceptual analysis begins with identifying research questions and choosing a sample or samples. Once chosen, the text must be coded into manageable content categories. The process of coding is basically one of selective reduction, which is the central idea in content analysis. By breaking down the contents of materials into meaningful and pertinent units of information, certain characteristics of the message may be analyzed and interpreted.

An example of a conceptual analysis would be to examine a text and to code it for the existence of certain words. In looking at this text, the research question might involve examining the number of positive words used to describe an argument, as opposed to the number of negative words used to describe a current status or opposing argument. The researcher would be interested only in quantifying these words, not in examining how they are related, which is a function of relational analysis. In conceptual analysis, the researcher simply wants to examine presence with respect to his/her research question, i.e. whether there is a stronger presence of positive or negative words used with respect to a specific argument or respective arguments.

4.2.2 RELATIONAL ANALYSIS

As stated above, relational analysis builds on conceptual analysis by examining the relationships among concepts in a text. And as with other sorts of inquiry, initial choices with regard to what is being studied and/or coded for often determine the possibilities of that particular study. For relational analysis, it is important to first decide which concept type(s) will be explored in the analysis. Studies have been conducted with as few as one and as many as 500 concept categories. Obviously, too many categories may obscure your results and too few can lead to unreliable and potentially invalid conclusions. Therefore, it is important to allow the context and necessities of your research to guide your coding procedures.

There are many techniques of relational analysis available and this flexibility makes for its popularity. Researchers can devise their own procedures according to the nature of their project. Once a procedure is rigorously tested, it can be applied and compared across populations over time. The process of relational analysis has achieved a high degree of computer automation but still is, like most forms of research, time consuming. Perhaps the strongest claim that can be made is that it maintains a high degree of statistical rigor without losing the richness of detail apparent in even more qualitative methods.

The Palmquist, Carley and Dale study, a summary of "Applications of Computer-Aided Text Analysis: Analyzing Literary and Non-Literary Texts" (1997) is an example of two studies that have been conducted using both conceptual and relational analysis. The Problematic Text for Content Analysis shows the differences in results obtained by a conceptual and a relational approach to a study (<http://writing.colostate.edu/guides/research/content/>)

4.3 ISSUES OF RELIABILITY AND VALIDITY

The issues of reliability and validity are concurrent with those addressed in other research methods. The reliability of a content analysis study refers to its stability, or the tendency for coders to consistently re-code the same data in the same way over a period of time; reproducibility, or the tendency for a group of coders to classify categories membership in the same way; and accuracy, or the extent to which the classification of a text corresponds to a standard or norm statistically.

The overarching problem of concept analysis research is the challengeable nature of conclusions reached by its inferential procedures. The question lies in what level of implication is allowable, i.e. do the conclusions follow from the data or are they explainable due to some other phenomenon? For occurrence-specific studies, for example, can the second occurrence of a word carry equal weight as the ninety-ninth? Reasonable conclusions can be

drawn from substantive amounts of quantitative data, but the question of proof may still remain unanswered.

The generalizability of one's conclusions, then, is very dependent on how one determines concept categories, as well as on how reliable those categories are. It is imperative that one defines categories that accurately measure the idea and/or items one is seeking to measure. Akin to this is the construction of rules. Developing rules that allow one, and others, to categorize and code the same data in the same way over a period of time, referred to as stability, and is essential to the success of a conceptual analysis. Reproducibility, not only of specific categories, but of general methods applied to establishing all sets of categories, makes a study, and its subsequent conclusions and results, sounder.

4.4 ADVANTAGES OF CONTENT ANALYSIS

Content analysis offers several advantages to researchers who consider using it. In particular, content analysis relates:

- Directly at communication via texts or transcripts, and hence gets at the central aspect of social interaction
- Allow for both quantitative and qualitative operations
- Provides valuable historical/cultural insights over time through analysis of texts
- Permit a closeness to text which can alternate between specific categories and relationships and also statistically analyzes the coded form of the text
- Used to interpret texts for purposes such as the development of expert systems (since knowledge and rules can both be coded in terms of explicit statements about the relationships among concepts)
- Giving an unobtrusive means of analyzing interactions
- Provides insight into complex models of human thought and language use
- Considered as a relatively "exact" research method (based on hard facts, as opposed to Discourse Analysis).

4.4.1 DISADVANTAGES OF CONTENT ANALYSIS

Content analysis suffers from several disadvantages, both theoretical and procedural. In particular, content analysis causes lot of inconveniences as it is:

- Time consuming
- Subject to increased error, particularly when relational analysis is used to attain a higher level of interpretation

- Often devoid of theoretical base, or attempts too liberally to draw meaningful inferences about the relationships and impacts implied in a study
- Inherently reductive, particularly when dealing with complex texts
- Tends too often to simply consist of word counts
- Often disregards the context that produced the text, as well as the state of things after the text is produced
- Difficult to automate or computerize

4.5 BIBLIOMETRICS, SCIENTOMETRIC AND INFORMATIC

4.5.1 BIBLIOMETRICS

‘Bibliometrics is quantitative study of various aspects of literature of a subjects and are used to identify the pattern of publication, authorship, citation and or secondary journal coverage in the hope that such regularities can give an insight into the dynamics of the area under consideration’.

The term ‘Bibliometrics’ has two roots-‘Biblio’ and ‘Metrics’. The Word ‘Biblio’ is derived from the combination of a Latin and Greek word ‘Biblion’ meaning book, paper, etc. Which in turn was derived from the word Byblos, a city of Phoenicia. The Word ‘Metrics’ is derived either from the Latin or Greek word ‘Metricus’ or ‘Metrikos’ respectively, each meaning measurement.

According to Pritchard “It is that branch of information theory that attempts to analyse quantitatively the properties and behavior of record knowledge”. Fairthorne defines it as “The quantitative treatment of the properties of recorded discourse and behavior pertaining to it.” To Sengupta, it is “the organization, classification and quantitative evaluation of publication patterns of all macro and micro communications along with their authorship by mathematical and statistical calculus”.

Three basic laws have been formulated in bibliometrics based on some important studies. These are statistical expressions derived on the basis of studies on some characteristics such as scattering of articles on a subject in various periodicals, measuring the productivity of authors on the basis of the number of articles contributed by them, the ranking of words in a text on the basis of their frequency of occurrences etc. The Three basic laws in Bibliometrics are:-

- Lotka’s Law: This relates to a study of the productivity of authors. It is helpful in scientific productivity studies.

- Bradford’s Law of Scattering: This describes the pattern of scatter of literature on a subject in various periodicals. The statistical regularity pointed out by Bradford’s law provides an objective means of determining zones of relative richness or value to a given kind of library collection.
- Zipf’s Law: This is based on a study of the relationship of the frequency of occurrence of words in a text and their ranking in a descending order. This can be effectively used in the generation of semi automatic or automatic indexes useful for an information retrieval system. It can also be used for deciding the correct authorship of disputed works and for identifying words more frequently used in different foreign languages.

In 1935, George Kingsley Zipf formulated his law to predict the frequency of words within a text. The law states that, “In a relatively lengthy text, if you list the words occurring within that text in order of decreasing frequency, the rank of a word on that list multiplied by its frequency will equal a constant”. The equation for this relationship is:

$$r \times f = k$$

Where, r= the rank of the word

f = the frequency, and

k = the constant.

Some of the areas where bibliometric techniques are consistently applied are:

- To identify research trends and growth of knowledge of different scientific disciplines.
- To identify users of different subjects.
- To identify authorship and its trends in documents on various subjects.
- To forecast past, present and future publishing trends.
- To identify core periodicals in different disciplines

Sample of Zipf’s Distribution

Word	Rank	Frequency	Rank Frequency
The	01	120	120
Of	02	110	220
Terms	03	95	285
To	04	78	312
A	05	62	310

4.5.2. SCIENTOMETRIC

Scientometrics is nothing but the coherent organization of science and its productivity analysis. It is used to mean a communication process in science including socio-cultural aspects which appears to be synonymous to science with more impressive or quantitative aspects.

Scientometrics is the science of measuring and analyzing science. In practice, Scientometrics is often done using Bibliometrics which is a measurement of the impact of (scientific) publications.

Modern scientometrics is mostly based on the work of Derek J. de Solla Price and Eugene Garfield. The latter founded the Institute for Scientific Information which is heavily used for Scientometrics analysis.

Methods of research include qualitative, quantitative and computational approaches.

One significant finding in the field is a principle of cost escalation to the effect that achieving further findings at a given level of importance grow exponentially more costly in the expenditure of effort and resources.

Related fields are the history of science and technology, philosophy of science and sociology of scientific knowledge.

This term was introduced and came into prominence with the founding of the journal named 'Scientometrics' by T. Braunin 1977, originally published in Hungary and currently from Amsterdam. The scope of the journal is to publish all those studies of quantitative aspects of science as a discipline or economic activity. Scientometrics is part of the sociology of science and has the application to science-policy making. It involves quantitative studies of scientific activities, including among others, publication, and so overlaps Bibliometrics to some extent. Scientometrics is branch of the 'Science of Science'. Nalimov and Mulchenko define this term, "as a sub-field which applies quantitative methods of the study of science as an information process". In this information model, publications are carriers of information and promoters of communication. Haitun treats 'Scientometrics', as a scientific discipline which performs reproducible measurements of scientific activity and reveals its objective quantitative regularities. According to him, Scientometrics methods include statistical and thesaurus methods, and indicators as to the number of citations, terms etc. There are two aspects within science of science, viz.:

- The analytical aspect which deals with the general laws of the development of science as a knowledge system and a specific social institution; and

- The normative aspect which deals with the development of practical recommendations for raising research efficiency.

4.5.3 INFORMATRICS

A branch of information science and of computer science, that focuses on the study of information processing and particularly as respect to systems integration and human interactions with machine and data.

The most recent metric term 'informetrics' comes from the German term 'informetrie' and was first proposed in 1979 by Nacke to cover that part of information science dealing with the measurement of information phenomena and the application of mathematical methods to the disciplines problems, to bibliometrics and parts of information retrieval theory, and perhaps more widely. Informatrics covers the empirical studies of literatures and documents, as well as theoretical studies of the mathematical properties of the laws and distributions that have been discovered. According to Egghe and Rousseau, informetrics is generally related to information production and or information production processes. Pao has summarized the general aims of informetrics studies as measuring activities and processes with respect to information as completing the deficiencies in information systems, as planning and managing information services, so as to improve the designs of documentation and information retrieval systems and predict future trends and uses. Informetric studies in library and information sciences are based on the mathematical expression of three principles relating to social life: the principle of least effort, the 80/20 rule and the principle of success breeds success. These principles have been embedded in the laws of Zipf, Lotka and Bradford. These laws have been studied and expressed in mathematical form, so that they can be used in practice. Also some scientists such as Fairthorne, Leimkuhler and Simon have investigated the similarities of these laws to standard statistical distributions.

In short, the Bibliometrics is a formed scientific sub-discipline which comprises a complex of mathematical and statistical methods used to analyze bibliographical characteristic of documents while scientometrics is a formed structural part of methodology, including the complex of mathematical and statistical methods used to analyze the quantitative characteristics of science as an enterprise. Informetrics on the other hand is a scientific sub-discipline where mathematical and statistical methods are used to investigate scientific and technical information on theoretical level and practical information activities.

4.6 CITATION MEASUREMENT

The Citation Measurement is a major component of citation analysis. It relates to a study of comprehensive information of the authors already adopted while writing their research article. The Citation measurement according to Turnbull (2013) has been placed below:

- Paying homage to pioneers
- Giving credit for related work (homage to peers)
- Identifying methodology, equipment, etc.
- Background reading
- Correcting one's own work
- Correcting the work of others
- Criticizing previous work
- Substantiating claims
- Alerting to forthcoming work
- Providing leads to poorly disseminated, poorly indexed, or un-cited work
- Authenticating data and classes of fact - physical constants, etc.
- Identifying original publications in which an idea or concept was discussed
- Identifying an original publication or other work describing an eponymic concept or term (i.e. Hodgkin's Disease)
- Disclaiming work or ideas of others (negative claims)
- Disputing priority claims of others (negative homage)

While complete, the variety of these reasons and their various implications are difficult to measure with any scale as classic citation analysis begins by counting all types of citations with little (or any) weight to reference types.

4.7 REFINED CLASSIC BIBLIOMETRICS

A refinement of mass citation counting is direct citation counting where the quantity of citations are tracked over a given period of time to test for aspects of an author's or article's impact. The standard formula for impact is:

$$n \text{ journal citations} / n \text{ citable articles published}$$

While somewhat blunt, applying and averaging citations along certain ordinals begins to become even more useful. Another basic bibliometric technique is calculating an immediacy index of influence using this formula:

$$\text{Citations received by article during the year} / \text{total number of citable articles published}$$

This is also a useful metric to see a broader view of impact, however it may not always be objective as some journals may have more prestige, a longer history of publication or may require certain types of atypical references (historical listings of past articles, for example). Therefore, we can see how varieties of journal articles can influence an immediacy index.

4.8 BIBLIOMETRIC COUPLING

Kessler suggests a technique known as bibliographic coupling: measuring the number of references two papers have in common to test for similarity. He then showed that a clustering based on this measure yields meaningful groupings of papers for research (and information retrieval) by stating "a number of papers bear a meaningful relation to each other when they have one or more references in common" (Kessler 1963).

Kessler also found a high correlation between groups formed by coupling and groups formed by subject indexing. As bibliometric analysis has become more automated, many have tried to take these techniques and engineer software to detect patterns and establish relationships between articles. Price and Schiminovich both began to analyze electronic publications in the late 60's and early 70's as some journals moved towards digital formats (Price, 1968; Schiminovich, 1971). These were the first real steps taken towards applying bibliometrics to electronic publications. Moreover, once data collection and input issues are overcome, information can be measured in its raw form on a computer far quicker than by hand.

4.9 CO-CITATION ANALYSIS

Marshakova and Small (independently) developed coupling further by noting that if two references are cited together, in a latter literature, the two references are themselves related. The greater the number of times they are cited together, the greater their cocitation strength. The major refinement between bibliometric coupling and cocitation is that while coupling measures the relationship between source documents, cocitation measures the relations between cited documents. This implies that an author purposefully chose to relate two articles together, not merely an association between two articles as coupling reveals.

4.10 COMMON BIBLIOMETRICS ERRORS

In addition to the simple yields we can get from basic bibliometric measurements, there are some basic inconsistencies in scholarship and publication. Common problems include:

- Multiple authors can be removed, lost (through *et. al.*)
Self-citations
- Similar author names, using initials mixed with full names
- Field variation of citation amounts or purposes

- Fluctuation of influence and use
- Human error (typos)

Moving toward even more automatic analysis, becoming aware of these types of errors, we can develop software to take them into account through measures such as indexes of common names and misspellings or by building field specific metadata. Wide scale data analysis of these simple methods can reveal relationships among all information types. We can begin to develop programs to ask interesting questions such as: are papers cited in the same footnotes and endnotes more closely related than other citations in a document overall? Does the order of citations in context imply relations? Does the type of data format (bibliography order or publication style) mean anything? Do citations have transitive relationships (A cites B, B cites C, how does A relate to C)? Software analysis is ideal for answering these types of comparison questions.

In general, all of the basic Bibliometric techniques work well with many types of information entities: authors, journals, organizations, departments, universities, and entire mediums. As we progress into the general laws of Bibliometrics, wider application domains are revealed.

CHAPTER- 5

DATA ANALYSIS AND FINDINGS

5. INTRODUCTION

Content analysis, a type of secondary data analysis, is used to analyze newspapers words. The result of content analysis allows researchers to identify, as well as quantify. Bernard Berelson defined Content Analysis as “a research technique for the objective, systematic, and quantitative description of manifest content of communications”.

Content Analysis is a research tool focused on the actual content and internal features of media. It is used to determine the presence of certain words, concepts, themes, phrases, characters, or sentences within texts and to quantify this presence in an objective manner. Text can be defined broadly as books, newspaper headlines and articles, speeches, conversations, etc. To conduct a content analysis on a text, the text is coded or broken down, into manageable categories on a variety of levels-word, word sense, phrase, sentence, or theme and then examined using one of content analysis basic methods: Conceptual analysis or relational analysis. The results are then used to make inferences about the messages within the texts, the writers, the audience, and even the culture and time of which these are a part. For example, content analysis can indicate pertinent features such as comprehensiveness of coverage or the intentions, biases, prejudices, and oversights of authors, publishers, as well as all other persons responsible for the content of materials.

The study revealed the nature of newspapers articles publishing, year wise productivity, most productive authors, etc. The findings are fruitful in substantiating the objectives formulated in the study.

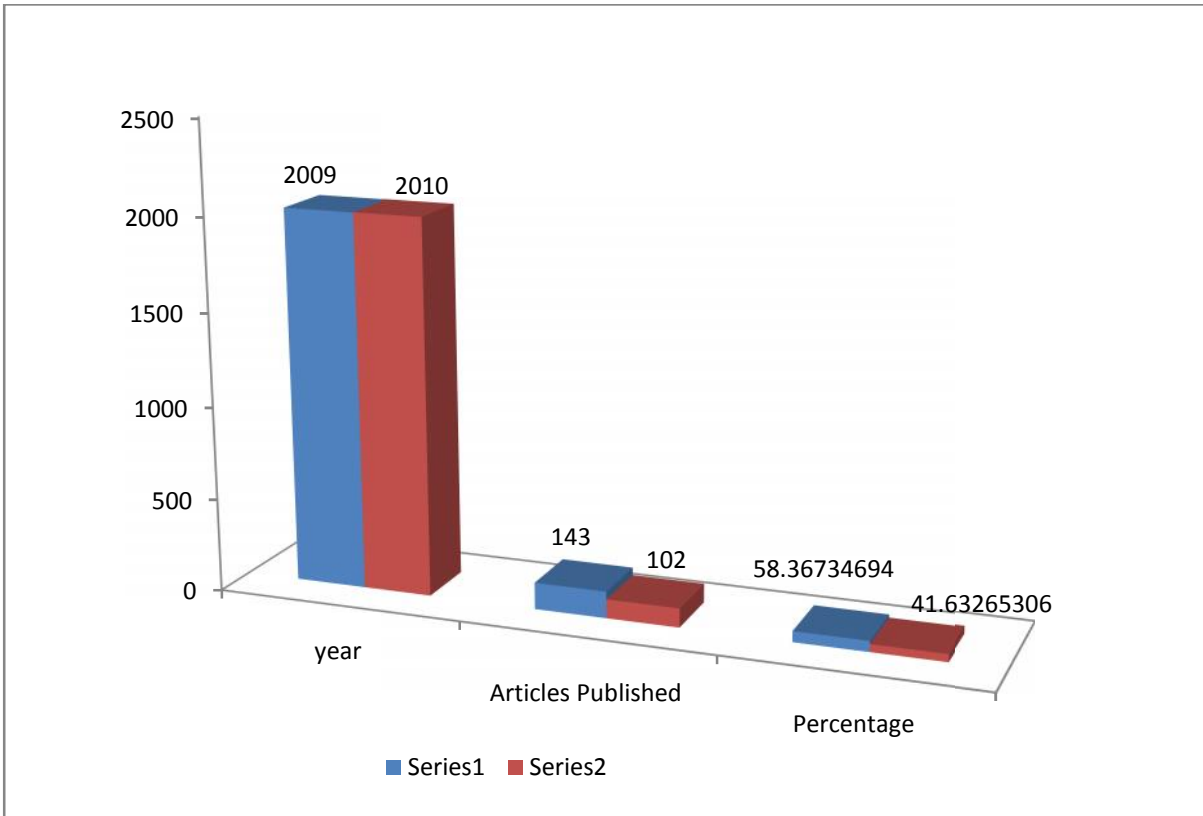

The articles collected from Vanglaini Newspapers was analysed and tabulated. The following are the analysis and findings

5.1 ARTICLE PUBLICATION

The article publication of the newspapers Vanglaini has been placed of both the years under study in Table 1. The Table 1 is also supported with Graph 1 for clear understanding.

Table: 1: Article Publication

Sl.no	Year	Articles Published	%
1	2009	143	58
2	2010	102	42
	Total	245	100

Graph 1: Article Publication

Publication in the newspaper is one of important components to make the society a lot respective of the coverage area. The Society is well informed about the development in different areas through newspaper. The data relating to the growth of publication in the newspaper obtained by the scholar through library method is projected on the above Table and Graph. The analysis of Table 1 reveals that in 2009 Vanglaini newspaper published 143 articles (58%) followed by 102 articles (42%) in 2010. In the year 2009 articles publication rose than in 2010. The publication depends upon the contribution of article from various quarters to where the author exposes its mind with regard to the development or Constance face by the Government or anybody or organization.

5.2 NEWSPAPER ARTICLES BY FREQUENCY OF WORDS

The Table 2 figures the newspaper articles by frequency of words. The table shows the division of particulars undertaken by the scholar into six (6) different components such as Descriptive, Descriptive/Critical, Descriptive/Analytical, Critical, Analytical and Descriptive/Analytical, Critical. The Table also figures six (6) numbers of articles including the occurrence of frequency.

Table 2: Analysis of Newspaper Articles by Frequency of Words

Sl. NO	Particulars	No. of Articles	No. of Frequency	%
1	Descriptive	150	150	34
2	Descriptive/Critical	42	84	19
3	Descriptive/Analytical	21	63	14
4	Critical	17	68	15
5	Analytical	9	45	10
6	Descriptive/Analytical/Critical	6	36	8
	Total		446	100.00

Graph 2: Newspaper Articles by Frequency of Words

Newspapers have, in the modern world, played an important role in the exercise of freedom of expression. Therefore, publication is open to receiving article manuscripts from freelance writers. Therefore writers from different areas contributing articles are published. The data relating to the publication is presented in table no 2. From the data analysis it shows that 150 articles are Descriptive (34%), with rank 2 constitute Descriptive/Critical 84 (19%), followed by Descriptive/Analytical with a total of 63 (14%), followed by Critical 68 (15%), Analytical 45(10%), and lastly Descriptive/Analytical/Critical with 36 (8%).

5.3 SUBJECT WISE DISTRIBUTION AND TYPE OF COVERAGE.

The subject wise distribution and type of coverage for the present study has been shown in Table 4 supplemented with Graph. The scholar has pointed out 45 different words from all 245 articles. The number of frequency occurring in the articles. The Table also figures the

number of articles on the corresponding word and the corresponding number of frequency including the percentage of frequency.

Table 3: Subject Wise Distribution and Type of Coverage.

Sl.No	Subject	No. of Articles	No. of Frequency	%
1	Politics	51	51	2
2	Education	20	40	2
3	Transportation	17	51	2
4	Religion	11	44	2
5	Literature	11	55	2
6	Health	10	60	2
7	Culture	10	70	3
8	Life	9	72	3
9	Medical	7	63	3
10	Mizoram Liquor Total Prohibition	7	70	3
11	Environment	7	77	4
12	Non Government Organisation	6	72	3
13	Employment	6	78	4
14	Agriculture	5	70	3
15	Disaster Management	5	75	3
16	Law	3	48	2
17	Tourism	3	51	2
18	Community	3	54	2
19	Power	3	57	3
20	Economy	2	40	2
21	History	2	42	2
22	Social Work	2	44	2
23	Society	2	46	2
24	Public Health Engineering	2	48	2
25	Road Construction	2	50	2

42	Force	1	42	2
43	Entertainment	1	43	2
44	Suicide	1	44	2
45	Traffic	1	45	2
			2191	100

Graph 3. Subject wise distribution

The analysis of Table 3 shows that politics 51 ((2%) constituted, followed by education 40 (2%), Transportation 51 (2%) and so on. It is interesting to note that the word employment 78 and environment figures much having the occurrence of 78 and 77 times (4%) followed by 8 words with 3%, 30 words with 2% and 5 words with 1% which are used in the newspapers. Because the newspaper covers the local news therefore the words cannot be made parallel in the national level. The Table also shows a bibliometric presentation of subject counting displayed the subject-wise trends covered under newspaper.

5.4 AUTHORSHIP PATTERN

The authorship pattern used in the newspaper under coverage has been placed in Table 4 which represents in a descending sequence of the articles contributed by the authors. The Table is also supplemented with Graph 4 for a clear understanding.

Table 4: Authorship Pattern

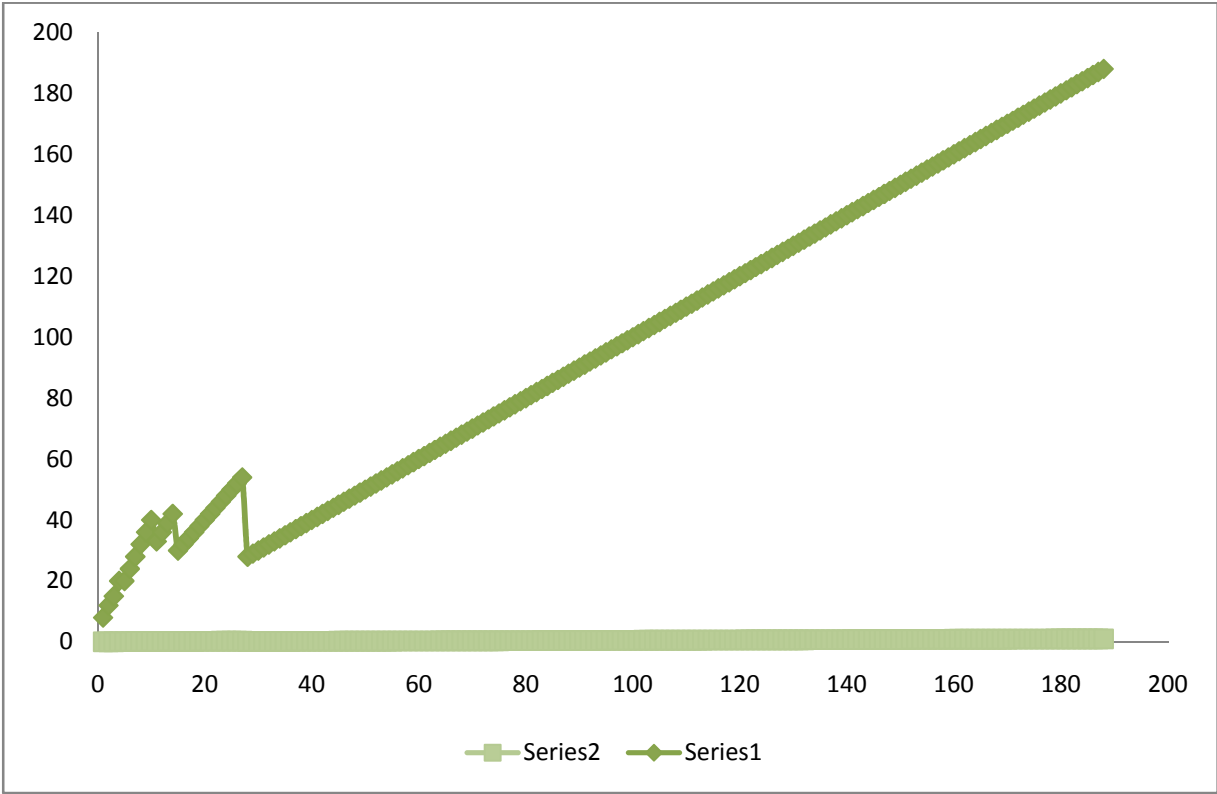

Sl.No.	Author	Article Contributed	No. of frequency	%

Graph 4. Authorship Pattern

The author analysis of 245 articles covered under the study placed in Table 4 shows that a total of 188 writers contributes articles to Vanglaini Newspapers. The most productive author Lalkhirhvela contributed 8(0.04%), followed by KL. Liana with 6(0.06%) articles, Lalchhuanawma Toehhong and Ramhmangaiha each with 5 articles (0.1%), followed by 6 authors with 4(0.2) articles each, and 3 writers contributed 3 articles (0.2%) each, and 14 writers contributed 2 articles each (0.2%) and the other 161 writers contributed 1(one) article each (0.2%) to the Newspapers. Aizawl has maintained its position among the top to contribute articles throughout the period of study i.e. 2009-2010. In this way Aizawl has established itself as one of the giants in the field of providing information to the people. Cities are and Villages differ significantly in their annual publication growth rate in publishing articles. Such a list identifies the names of contributors to the Newspaper under the present study. It shows that the all the contributors are single authors. There were no co-authored works. It is evident from the analysis that the articles are contributed only by male.

5.5 UNIQUE MIZO TERM

The Unique Mizo Term used in the Vanglaini Newspaper from the period 2009-10 has been displayed in Table 5. A total number of 48 words with their occurrence and corresponding frequency with percentage has been clearly stated in the Table. The Table is also supplemented with Graph for a clear vision.

Table 5. Unique Mizo Term

Graph 5. Unique Mizo Term

The analysis, reveals that only 48 Unique Mizo words appeared in Vanglaini Local Newspaper articles. Three Mizo Unique terms such as Hlamzuih (0.2%), Chapchar Kut (0.3%), Pasaltha (0.3%) appeared 2 times each and the other Mizo term i.e. 145 term occurred one time each. The data collected was analysed using Zipfs law and it was listed according to decreasing numbers and was projected in Table 5.

5.6 ENGLISH TERM

Publication of Newspapers belongs to the oldest methods of getting information to the public and keeping people well-informed on important events. They can cover more news in greater detail than other media. Newspapers articles are veritable tools for promoting literacy through reading, writing and dialogues (among readers and critics), which are the hallmarks of effective and efficient use of language. Language can be used to promote the teaching of reading and writing, and ultimately build a literate community. The English Term used in the newspaper covered under the study has been reflected in Table 6. which reflects 1445 words. It also reflects the number of times word has been used in the newspaper and the frequency and correspondence frequency has been drawn against each word placed in the table.

Graph 6: English term

The analysis of Table 6 shows a total of 1445 English word occurred during the study period and it shows that the word state has been used 57 times having a (0.004178686%) , followed by the word department 49 times (0.007184408%) and motor 41(0.009017166%). The other word stated in the table clearly indicates the number of times it has been used with the frequency and the percentage. It is interesting to note that, Vanglaini is a local newspaper in Mizo but the English word has a predominant over the Mizo word as it is because of the fact that most of the English words are used to correspond the feelings of the public.

5.7 FINDINGS

- From the analysis of Table 1 it could be observed that, in the year 2009-2010 a total of 245 articles are published in Vanglaini Newspaper excluding editorial column. In the year 2009 a total of 143 articles were published while in 2010 a total of 102 articles were only published. This shows that decreasing tendency of the authors in submitting the views in the newspaper articles. This may be due to several causes involved with the authors which in due course of time can be eradicated. $R \text{ (rank)} \times f \text{ (frequency)} = c \text{ (constant)}$.
- Table 2 clearly focuses on the division of the type of articles rendered by the authors in the newspaper. Out of 6 different particulars 150 numbers of articles are descriptive while 84 numbers of articles are both descriptive and critical. Further 21 numbers of articles fall on the category of descriptive, analytical both. The 17 numbers of articles are critical while 9 numbers of articles are analytical. It is interesting to note that 6 numbers of article constitute descriptive, critical and analytical. The number of

frequencies of all the articles place according to descending sequences also shows that 150 number of frequency (34%) are for descriptive articles, 84 number of frequency (19%) are both descriptive and critical, 63 number of frequency (14%) while 68 number of frequency (15%) are for critical articles. Further 45 number of frequency (10%) constitute the analytical articles where as 36 number of frequency (8%) are all descriptive critical and analytical. The frequency has been calculated by Zipfs law that is $r \times f = c$. The analysis further shows that most of the authors prefer to submit their write-up in a descriptive way and also in a critical way. This is a projective state to put the views of the author for the general public about the policies, rules, planning, etc. of the government.

- From the data analyzed placed in Table-3, it shows that, even though the study undertaken is for only two years that is 2009 and 2010, 45 words (subjects) occurred in the study period. From the total of 45 words occurrence Politics occupied the rank 1 with 51 (2%), this shows that the authors are much more aware of the political situation in Mizoram.
- Table -4 after analysis it was observed that a total of 188 writers contribute articles to the Newspaper. There were no co-authored works. It is evident from the analysis that the articles are contributed only by male. The scholar found that Aizawl has established itself as one of the giants in the field of providing information to the people. Cities and Villages differ significantly in their annual publication growth rate in publishing articles. Such a list identifies the names of contributors to the newspapers under the present study.
- From the data analysis placed in Table- 5 it is cleared that total of 48 Mizo unique word occurred in this Local Newspaper. The three most terms occurs with 2 times each and the remaining 45 terms occurs 1 one time each. This may be because English language being important for education, administration, formalities and governance is widely used.
- The English term used in the newspaper covered under the study period i.e. 2009-2010 reflects that 1445 word occurred.
- As noticed in the present study, in the articles under study it was observed after analysis that a number of 18 pictures appeared along with the article.

CHAPTER- 6

SUGGESTIONS AND CONCLUSION

6.1. SUGGESTIONS

Based on the findings, the following suggestions are submitted herewith:

- A total of 245 articles were produced between the years 2009-2010 which was published on Monday, excluding editorial. It shows that article is published regularly with minimum 2 everyday. This kind of study needs to be undertaken in the future as it gives fruitful information to the researchers as well as for the knowledge of the people.
- A total of 187 different authors contribute articles to Vanglaini Newspaper, the most productive author contributed only 8 times, so it shows that people need to contribute more in order to present fruitful information to the people, and to inform what is going on in the Society, also for the development of literature. The geographical distribution of authors revealed that the contribution from the City is more. Therefore, the people from Villages need to contributed more in order to interact with the Government and with the Society
- The Present Study is only confined to a small period of 2 years that is 2009-2010. More extensive study may be undertaken in future covering larger area. As this kind of study is important as it gives information to the people.
- Research using Zipf's law has not been carried out so far, hence future scholar may consider taking up the test.
- This kind of study is not yet undertaken by the scholar before, so future scholar may consider doing this kind of research because newspaper is one of the sources of information in Mizoram.
- More Mizo unique terms are requested to use rather than English word. As the Newspaper are on Mizo language. In order to lift and to make progress of Mizo Language, more use of Mizo unique terms are necessary and required.
- The Studies shows that the Newspaper Articles shows bias only to regional it is suggested that it should also cover national and international level, in order to inform what is going on in our World.
- If possible a Picture need to be included more in the newspapers, for clear vision of the articles.

6.2 CONCLUSION

Newspapers are the most useful sources of information on current affairs. The current study is to analyze the content covered by the Mizo daily Vanglaini because this kind of work has not been done in the past. Vanglaini is a regional newspaper, with wide readership across the state. Newspaper from the year 2009-2010 has been taken for this study, which comprises 245 articles.

The study is carried out because of its importance as the intellectuals, writers, authors contribute their knowledge primarily to build and betterment of the society which, however do not restrict to any specific area. Such an analytical study is first of its kind and no one has taken seriously to view the same in past. The problem lays with the fact that, in spite of a good coverage in its contents, the people are neither aware nor conscious to implement the same or used to the words. The scholar has taken sporadic attempt to highlight the importance of such article through analysis which will give much impact on the society.

Content Analysis of Daily Newspapers, the study was under taken because newspapers are a tool for educational and personal empowerment. Information is power. The use of newspapers is a tool for empowerment. If people constantly have to depend on someone else to give them the information they need, they will remain more dependent and thus weaker than others who are capable of retrieving their own information. In today Society to become more independent and increase active learning, it need to be able to find, evaluate, and communicate information independently. Newspapers are an excellent source for the presentation of information. Newspapers, therefore, can facilitate the development of skills through both an intellectual and personal empowerment process.

The findings are fruitful in substantiating the objectives of the study. This study will help to examine the nature and growth of articles published in Vanglaini newspaper during the year 2009-1010.

Information plays an important role, literature is considered as the best vehicle for expressing human though, though there are a lot of literature available on the net, printed ones occupies the majority in Mizoram so for that Literature are important in order to provide and educate the people, for that this study will help to examine the nature and growth of articles publication during 2009-2010.

Bibliometrics is undertaken as it tips a technical name for a range of method using information on published materials. Zipfs law is used as it is known as word of occurrences, and it counts the frequency of words in a text. As this study was undertaken with the believe

that this will cater the information needs of the people and will benefits the users in the publication of articles.
